

In the Claims:

Please amend the claims as follows. The following listing of claims replaces all previous listings.

1 – 19 (Cancelled).

20. (Currently Amended) A computer-implemented method ~~, for managing a Web site lifecycle from a graphical user interface (GUI) comprising:~~

displaying, by a computing system, a web [[Web]] browser in a first window of a [[said]] graphical user interface (GUI) ; ~~[[,]] wherein a user browses on said Web~~

receiving input via the web browser identifying to locate a web [[Web]] page to be edited;

selecting displaying an edit indicator displayed in the graphical user interface ~~on said GUI indicating a preference to edit said Web page;~~

receiving input via the edit indicator and representing a command to edit the web page;

in response responsive to the input said selecting, transitioning from said first window to display a page editor;

displaying choosing a publish indicator in the graphical user interface; ~~displayed on said GUI indicating to publish said edited Web page~~

receiving input via the publish indicator and representing a command to publish the web page; and

in response, responsive to said selecting, transitioning said first window back to display said web [[Web]] browser.

21 – 31 (Cancelled).

32. (New) A computing system executing a page editing application that configures the computing system to:

present a web browsing interface in a page editing application and access a web page in response to input identifying the web page in a desired web site;

in response to input selecting an edit command in the web browsing interface:

(i) download the web page, including related files associated with display of the web page,

(ii) present a page editing interface in the page editing application, and

(ii) receive input editing the web page; and

in response to input selecting a publish command in the page editing interface, publish the web page as edited by uploading the web page as edited to a file transfer protocol server.

33. (New) The computing system set forth in claim 32, wherein the page editing application configures the computing system to scan the web page for page-dependent related files prior to downloading.

34. (New) The computing system set forth in claim 32, wherein the page editing application configures the computing system to scan the web page as edited for a modification to a page-dependent file prior to publishing.

35. (New) The computing system set forth in claim 34, wherein the modification comprises at least one of an edit to a page-dependent file, deletion of a page-related file, and addition of a page-dependent file.

36. (New) The computing system set forth in claim 32, wherein the page editing application is configured to automatically determine a directory path for uploading the page as edited.

37. (New) A computer-implemented method, comprising:

presenting, by a computing system, a web browsing interface in a page editing application;

accessing a web page in response to input identifying the web page in a desired web site;

receiving input selecting an edit command in the web browsing interface, and in response:

(i) downloading the web page, including related files associated with display of the web page,

(ii) presenting a page editing interface in the page editing application, and

(iii) receiving input editing the web page; and

receiving input selecting a publish command in the page editing interface, and, in response, publishing the web page as edited by uploading the web page as edited to a file transfer protocol server.

38. (New) The method set forth in claim 37, further comprising scanning the web page for page-dependent related files prior to downloading.

39. (New) The method set forth in claim 37, further comprising scanning the web page as edited for a modification to a page-dependent file prior to publishing.

40. (New) The method set forth in claim 39, wherein the modification comprises at least one of an edit to a page-dependent file, deletion of a page-dependent file, and addition of a page-dependent file.

41. (New) The method set forth in claim 37, further comprising, prior to publishing, automatically determining a directory path for uploading the page as edited.
